

# Anti Wrinkle Injections

## Information Sheet

### **What are Anti Wrinkle Injections?**

Anti Wrinkle Injections are a purified form of protein that has been used in medicine for over 40 years. It is a non surgical, medical treatment that can temporarily reduce facial lines and wrinkles by relaxing the muscles. During the treatment very low doses are administered via a series of tiny injections directly into the muscles that will reduce your lines.

### **How does it work?**

Lines and wrinkles are caused by repeated muscle activity in certain areas. By injecting directly into the muscles the transmission of nerve impulses to the muscles are blocked. This reduces the activity of the muscle and so reduces the lines formed.

### **Will the Treatment Hurt?**

Pain is very individual but the majority of patients find the discomfort minimal. The needle used is exceptionally fine and coupled with the experience of your practitioner there should be little or no pain at all..

### **How often will I require treatments?**

Results from the treatments can last up to 3 months. We recommend that you visit us at least four times in the first year of treatment to ensure we reach your desired affects.

### **What else can Botulium toxin type A be used for?**

These can also be used for excessive sweating particular under the arms.

### **What will happen if I stop treatments?**

If you do not continue the treatments on a regular basis lines and wrinkles will return as before.

### **How do I know the procedure is safe?**

Botox<sup>®</sup>, Dysport<sup>®</sup>, Bocature, Vistabel are all types of Botulium toxin type A and are prescription only medicine. Only following a stringent consultation and health check will the practitioner decide what is required for you. We pride ourselves on our knowledge, the standards and professional level of care that have led to todays great reputation.

### **Post Treatment Advice**

- You will start to see results from approx Day 5-10. Full effects will be realised by Day 14.
- Do not massage or rub the treated area.
- Should bruising occur apply a cold compress to the area.
- Again, should you receive any unusual reaction or symptoms please contact us immediately.
