

Derma Pen Mesotherapy

Information Sheet

What is Derma Pen Mesotherapy?

This is a medical specialty that involves injecting microscopic quantities of natural extracts, homeopathic agents, pharmaceuticals and vitamins directly in to the middle layer of the skin by use of micro-injections with a Derma Pen. The customised blend of collagen-stimulating vitamins nourishes and rejuvenates your skin, and can treat various conditions, and is a very popular treatment for younger patients who want to prevent wrinkles.

What conditions is it effective for?

- Loose, dull skin
- Acne scars and wound healing
- Lines and wrinkles
- Dehydrated, sun damaged skin.
- Large pores
- Hyperpigmentation
- Hair loss.

Will the treatment hurt?

With the micro-injection method, most people feel very little discomfort, however to eliminate this sensation a topical anaesthetic can be applied to the skin half an hour prior to your treatment.

Is there any down time after the treatment?

The treated area may appear slightly red for up to 24 hours following the treatment, and you will be asked not to wear make up for 12 hours following the treatment. Most people have their treatment at the end of the day and will return to normal activities the following day.

How long will the treatment session last?

This is dependant on the skin condition and the area being treated. Treatment time is typically 1 hour.

How often will I need treatments?

Best results for most patients are seen after a course of 5 treatments, carried out 2 to 4 weeks apart, however your individual skin regime will be discussed with you at consultation to ensure you have the best possible outcome.

How do I know my Practitioner is safe?

Always choose a qualified advanced Nurse Practitioner, Doctor or Dentist who has a minimum of 5 years working in the field of aesthetics to perform this, or any aesthetic cosmetic procedure.
